

Hayward's Primary School Calculation Policy 2019

Hayward's Maths Vision

At Hayward's, we strive for all children to develop a positive attitude to Maths as an interesting and valuable subject; we do not want children to fear Maths yet have a belief that they can achieve highly.

We strive for all children to become confident when talking about their mathematics, using reasoning – apparatus, diagrams and explanations – to show their understanding; we have high expectations of children's use of mathematical language.

We strive for all children to understand that Maths is not only the quick recall or computation of number facts – although these are fundamental – but that it is the considered thought and application using what they know to work through a problem; we want children to feel confident when solving problems.

We strive for all children to develop a range of efficient strategies – their own tool kits – and make choices about how to use their maths; we want children to make decisions and explain them.

We strive for all children to feel challenged but enthused by Maths; we want every child to enjoy and succeed as Mathematicians, understanding its very important place in our world.

Aims

The national curriculum for mathematics aims to ensure that all pupils:

• become fluent in the fundamentals of mathematics, including through varied and frequent practice with increasingly complex problems over time, so that pupils develop conceptual understanding and the ability to recall and apply knowledge rapidly and accurately

 reason mathematically by following a line of enquiry, conjecturing relationships and generalisations, and developing an argument, justification or proof using mathematical language

• can solve problems by applying their mathematics to a variety of routine and non-routine problems with increasing sophistication, including breaking down problems into a series of simpler steps and persevering in seeking solutions

Guidance for following the Calculation Policy

Written methods of calculations are based on mental strategies.

Each of the four operations builds on mental skills which provide the foundation for jottings and informal written methods of recording.

Skills need to be taught, practised and reviewed constantly. These skills lead on to more formal written methods of calculation.

Strategies for calculation need to be represented by models and images to support, develop and secure understanding. This, in turn, builds fluency.

When teaching a new strategy, it is important to start with numbers that the child can easily manipulate so that they can understand the methodology.

The transition between stages should not be hurried as not all children will be ready to move on to the next stage at the same time, therefore the progression in this document is outlined in stages.

Previous stages may need to be revisited to consolidate understanding when introducing a new strategy.

A sound understanding of the number system is essential for children to carry out calculations efficiently and accurately.

Our Methodology

At Hayward's, we want children to become confident in choosing the most efficient methods to solve a calculation. In many cases, children will have more than one method "up their sleeve" to find the solution to a calculation and will be able to pick the best one.

For children to be able to work with the columnar methods, we want children to have a sound understanding of place value. Many calculations should be solved mentally and/or with jottings; formal column methods are for calculations where the digits are varied and include regrouping or exchanging.

Correct	Avoid
regrouping	carrying
exchanging	borrowing/stealing
ones	units
calculation / equation	sum
is equal to / the same as	equals
unknown	answer

Correct Terminology

Calculation policy: Addition and Subtraction

Key language for addition: sum, total, parts and wholes, plus, add, altogether, more, 'is the same as' Key language for subtraction: take away, subtract, find the difference, fewer, less than

Addition and subtraction are inverse operations. Right from the start, children should be taught these as related operations. There are four number sentences (two using + and two using -) which can be written to express the relationship between 4 and 6 and 10. It is key to a good understanding of addition and subtraction that 6 + [] = 10 and 10 - 6 = [] are seen as ways of expressing the same question. Children should be encouraged to use inverse operations to check their solutions. Part-Whole models and bar models are visuals that show the relationship. It is also important to relate addition and subtraction to place value.

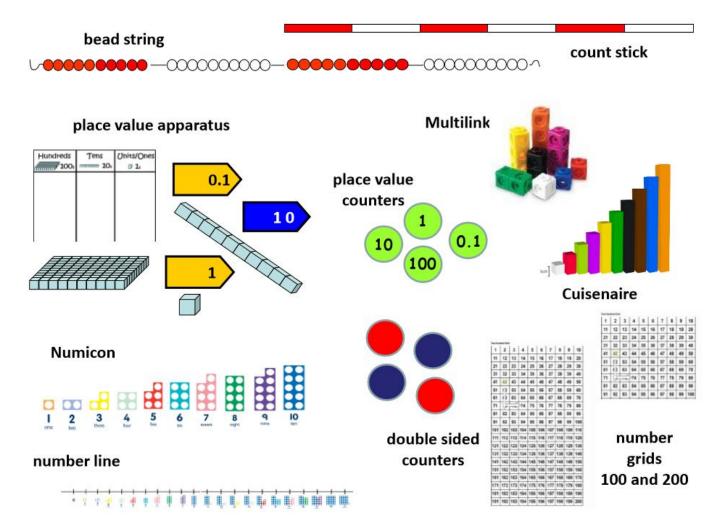

A digit's true value should always be referenced.

Here is an example of language used to teach and talk through column addition:

- Approximately, what will 245 + 378 be the same as? Let's use rounding to estimate.
- I have 5 ones and I am adding 8 ones so now I have 13 ones which I can regroup or repartition as 1 ten and 3 ones.
- Next, I have 6 tens and I am adding 7 tens but I also have 1 ten from regrouping which makes 14 tens. I can regroup this as 1 hundred and 4 tens.
- Finally: 2 hundreds add 3 hundreds add 1 hundred from regrouping makes 6 hundreds.
- 243 + 368 is equal to 611.
- How could I write this as a subtraction?

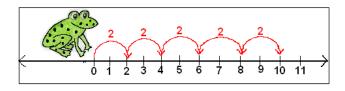

Resources and Images for Addition and Subtraction

All learners should use resources and imagery to both develop and show understanding. Children should regularly draw pictures showing real life contexts for problems which they are solving. In order to help children remember certain strategies, certain references will be used throughout the school:

A spider may be used to help children understand the strategy of vertical jumps on a number square.

A frog may be used to help children understand the strategy of horizontal jumps on a numberline.

EYFS

Age Band Statements (40-60 months)

- Recognises numerals 1 to 5
- Recognise some numerals of personal significance
- Counts up to three or four objects by saying one number name for each item
- Counts actions or objects which cannot be moved
- Counts objects to 10 and beginning to count beyond 10
- Counts out up to six objects from a larger group
- Selects the correct numeral to represent 1 to 5, then 1 to 10 objects
- Counts an irregular arrangement of up to ten objects
- Estimates how many objects they can see and checks by counting them
- Uses the language of 'more' and 'fewer' to compare two sets of objects
- Finds the total number of items in two groups by counting all of them
- Says the number that is one more than a given number
- Finds one more or one less from a group of up to five objects, then ten objects
- In practical activities and discussion, beginning to use the vocabulary involved in adding and subtracting
- Records, using marks that they can interpret and explain

Apparatus is key in helping children to achieve the age band statements. Children should be encouraged to show their understanding through the full range of apparatus. Children should also be encouraged to draw their own pictures to help to achieve and show their understanding of the statements.

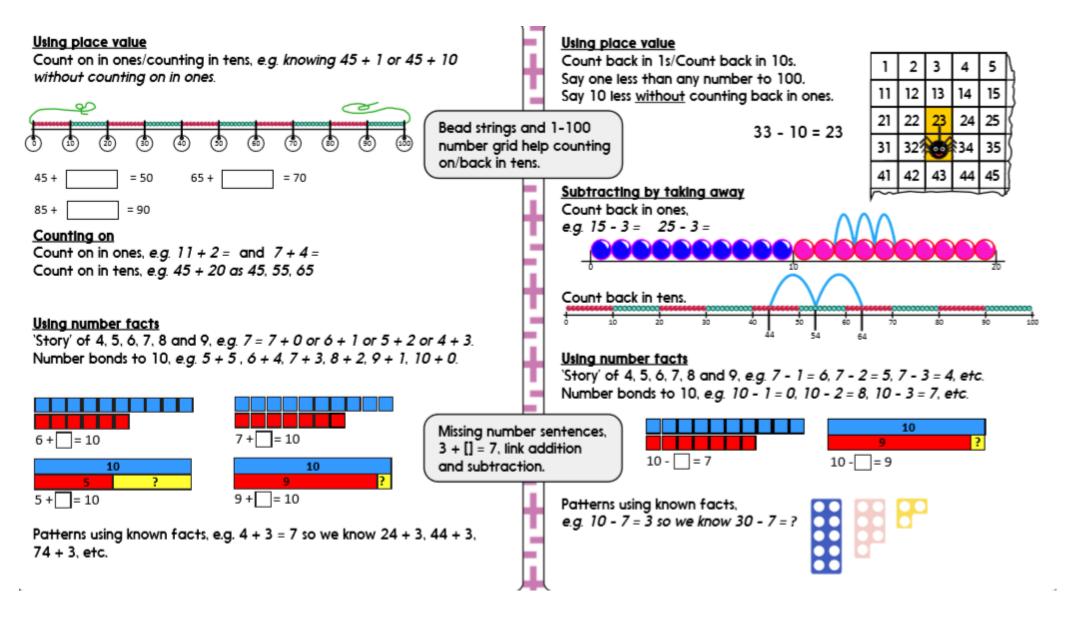

Early Learning Goal

Children count reliably with numbers from 1 to 20, place them in order and say which number is one more or one less than a given number. Using quantities and objects, they add and subtract two single-digit numbers and count on or back to find the answer. They solve problems, including doubling, halving and sharing.

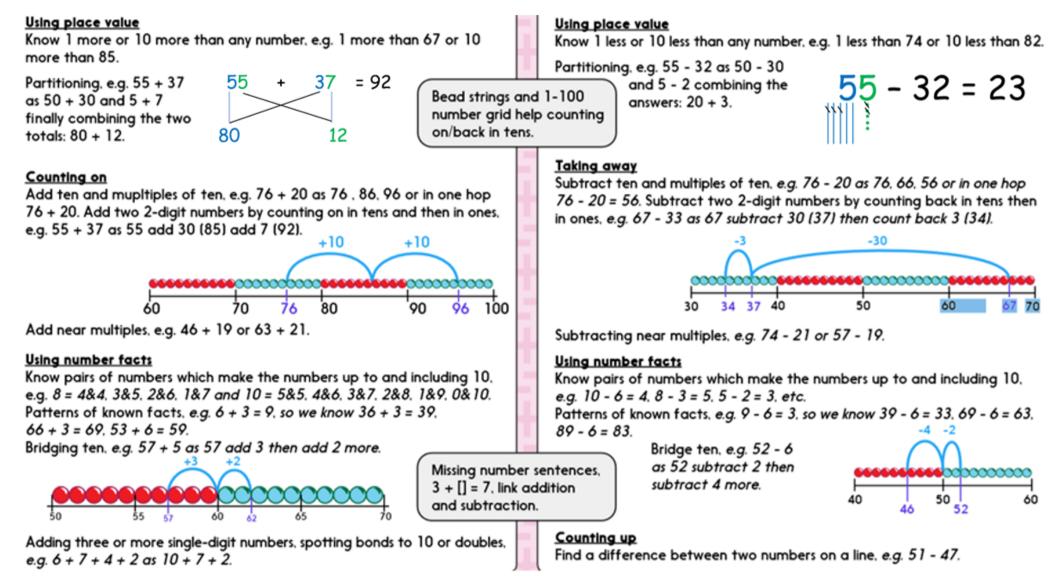

<u>Addition</u>

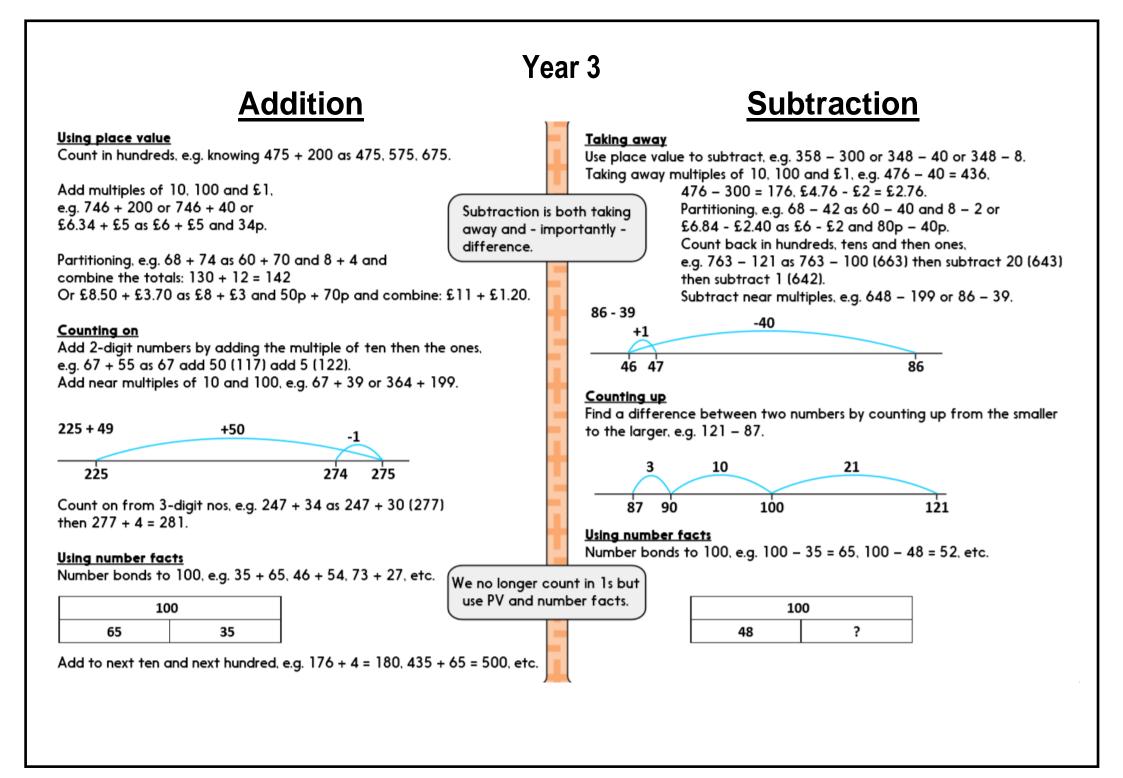

Subtraction

Addition

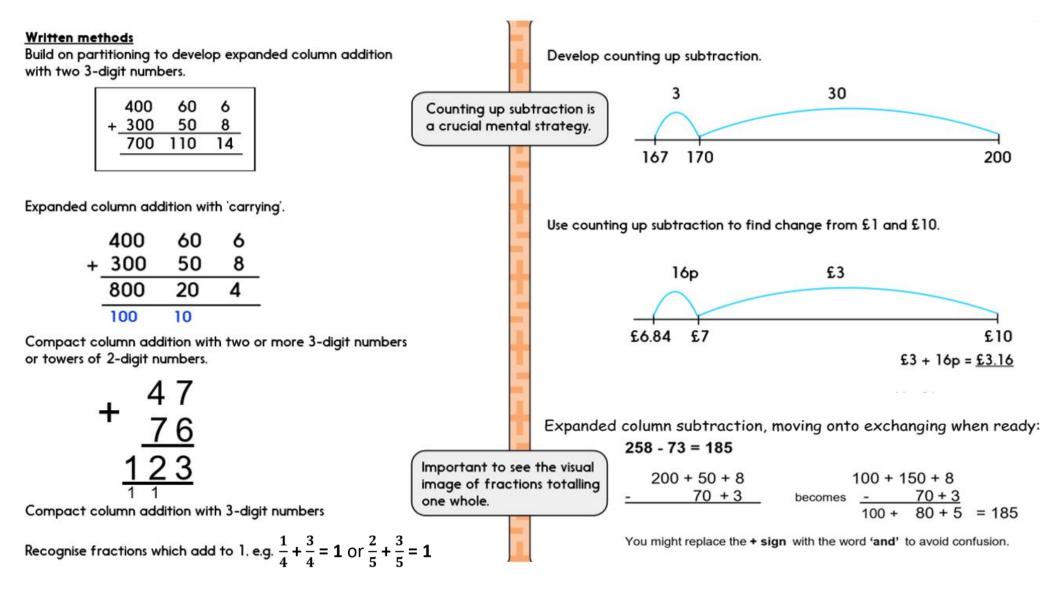

Subtraction

Written Addition

Written Subtraction

PV and number facts are central to mental strategies.

Subtraction

<u>Taking away</u>

Use place value to subtract, e.g. 4748 - 4000 or 4748 - 8, etc.

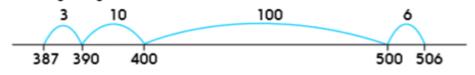

Take away multiples of 10, 100, 1000, £1, 10p or 0.1, e.g. 8392 - 50 or 6723 - 3000 or £3.74 - 30p or 5.6 - 0.2.

Partioning, e.g. £5.87 - £3.04 as £5 - £3 and 7p - 4p or 7493 - 2020 as 7000 - 2000 and 90 - 20.

Count back, e.g. 6482 - 1301 as 6482 - 1000, then - 300, then -1 (5181) Subtract near multiples, e.g. 3522 - 1999 or £34.86 - £19.99.

Counting up

Find a difference between two numbers by counting up from the smaller to the larger, e.g. 506 - 387.

100 + 10 + 6 + 3 - <u>119</u>

Using number facts

Number bonds to 10, 100 and derived facts, e.g. 100 - 76 = 24, 1.0 - 0.6 = 0.4.

Counting up is essential for money calculations and, later, decimals.

100		
76	24	

Number bonds to $\pounds1$ and $\pounds10$, e.g. $\pounds1.00 - 86p = 14p$ or $\pounds10 - \pounds3.40 = \pounds6.60$.

Counting on

Using place value

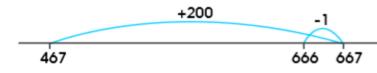

Add 2-digit numbers by adding the multiple of ten then the ones, e.g. 67 + 55 as 67 add 50 (117) add 5 (122). Add near multiples of 10, 100 and 1000, e.g. 467 + 199 or 3462 + 2999.

Addition

Count in thousands, e.g. knowing 475 + 200 as 475, 575, 675.

Partitioning, e.g. 746 + 203 as 700 + 200 and 46 + 3

or 134 + 707 as 130 + 700 and 4 + 7.

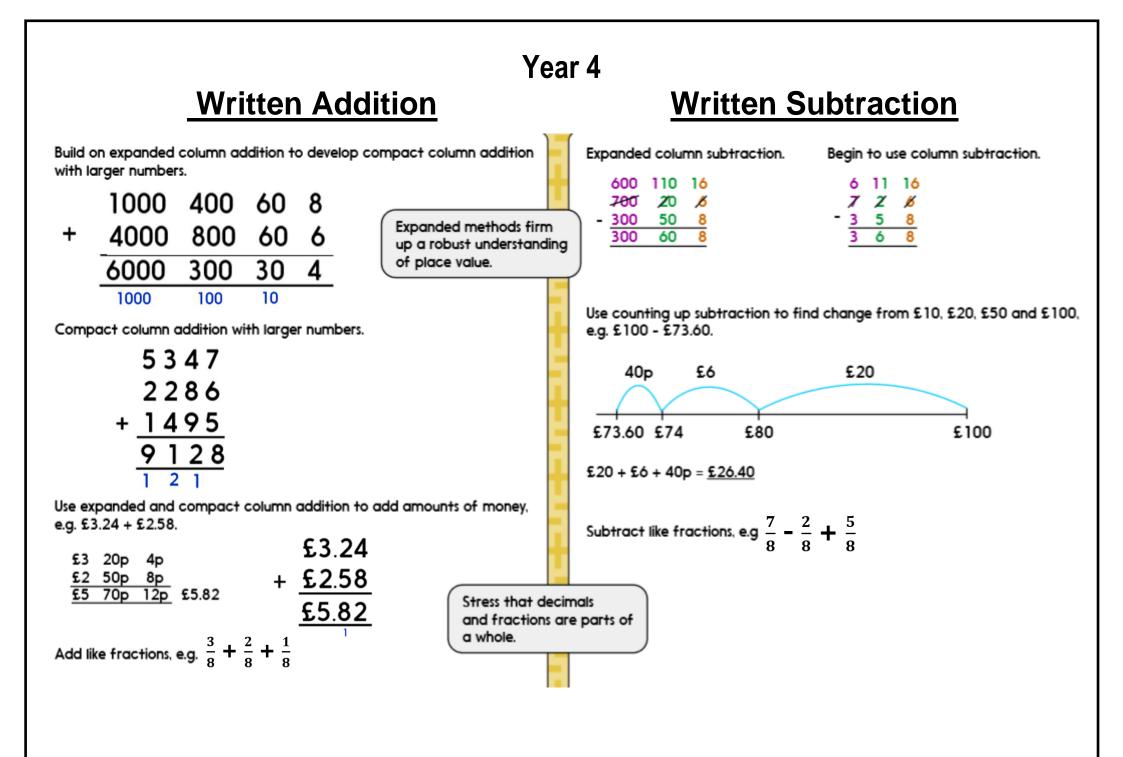

Count on to add 3-digit numbers and money, e.g. 463 + 124 as 463 + 100(563) + 20(583) + 4 = 587 or £4.67 + £5.30 as £9.67 add 30p.

Using number facts

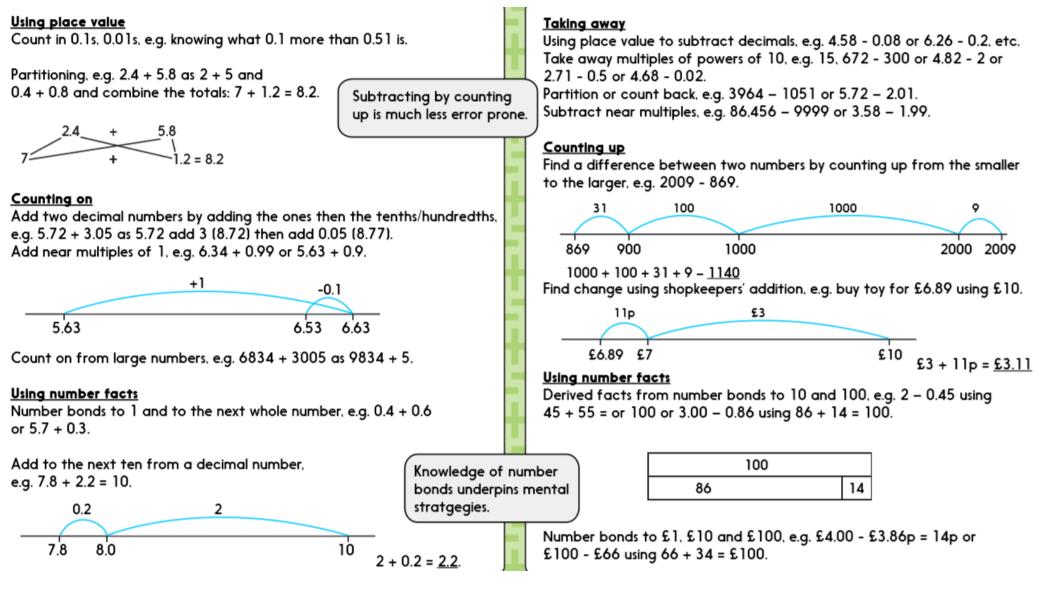

Number bonds to 100 and to next multiple of 100, e.g. 463 + 37, 1353 + 47.

Number bonds to £1 and to the next whole pound, e.g. £3.45 + 55p. Add to the next whole number, e.g. 4.6 + 0.4 or 7.2 + 0.8.

Subtraction

Addition

Written Addition

Expanded column addition for money leading to compact column addition for adding several amounts of money.

£14	60p	4p	
£28	70p	8p	
+ £12	20p	6р	
£55	60p	8p	£55.68
£1	10p		

Expanded version first embeds understanding of place value.

Compact column addition to add pairs of 5-digit numbers.

Continue to use column addition to add towers of several larger numbers.

Use compact addition to add decimal numbers with up to two places.

15.68 + 27.86 43.54

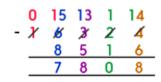

Adding fractions with related denominators,

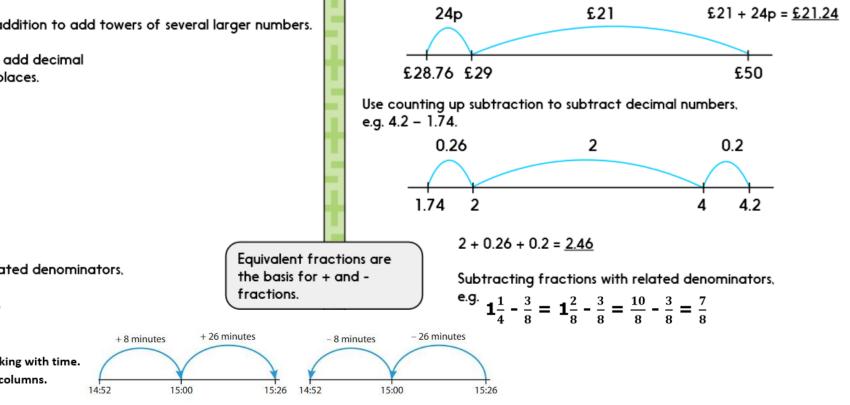

Number lines are useful when working with time. You don't have to think about the columns.

Written Subtraction

Compact column subtraction for numbers with up to 5 digits, e.g. 16,324 - 8516.

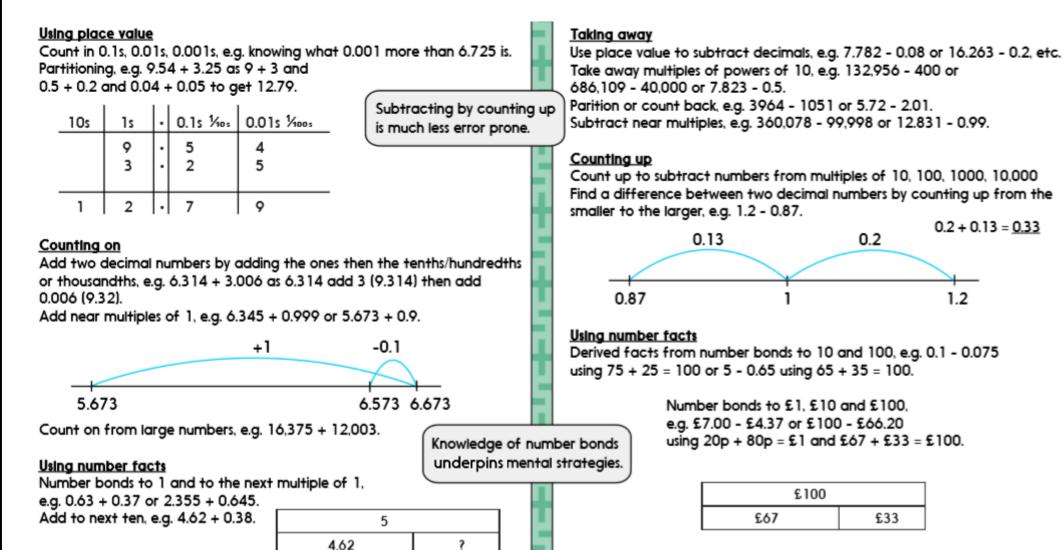

Continue to use counting up subtraction for subtractions involving money, including finding change or, e.g. £50 - £28.76.

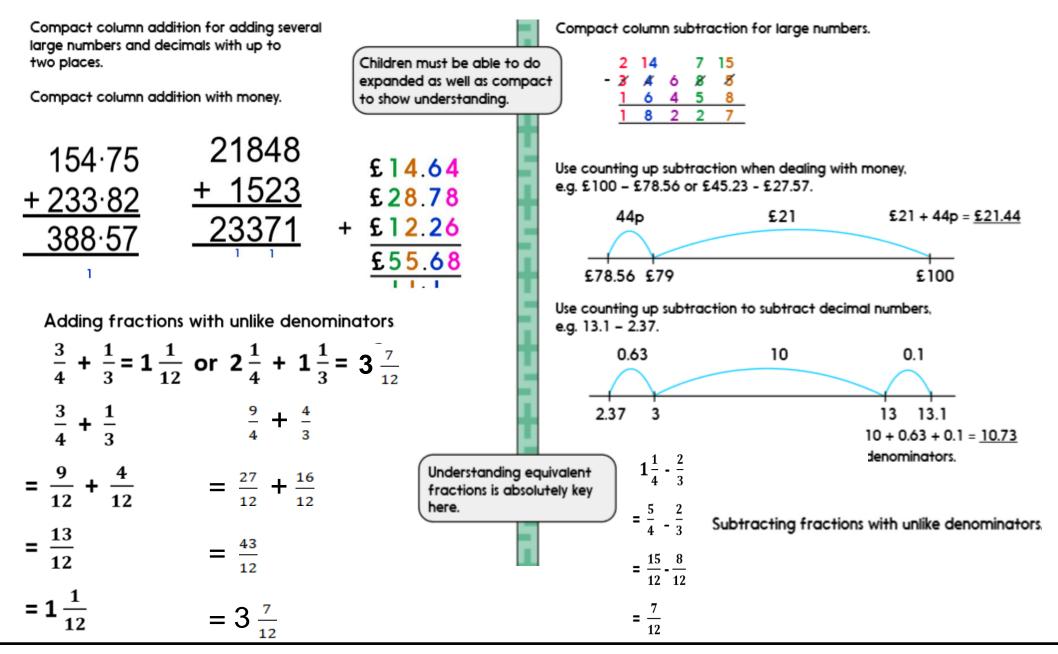

Addition

Subtraction

Written Addition

Written Subtraction

Calculation policy: Multiplication and Division

Key language for multiplication: multiply, times, factor, multiple, product, groups of, lots of, equal Key language for division: divide, share, group, sharing, grouping, equal

Multiplication and division are inverse operations. Right from the start, children should be taught these as related operations. There are four number sentences (two using x and two using \div) which can be written to express the relationship between 5 and 9 and 45. It is key to a good understanding of division that [] x 5 = 45 and 45 \div 5 = [] are seen as ways of expressing the same question. Like in addition and subtraction, equations can be written with the "equals" symbol not necessarily at the end of an equation: $5 = 45 \div 9$.

The **product** is the number made when two (or more) numbers are multiplied together. Children should use the word **product** from Key Stage One. **Factors** are the numbers that can be multiplied to make a **product**. It is also important to relate multiplication and division to place value.

A digit's true value should always be referenced.

Here are some examples of how linking back to place value can support the teaching of multiplication and division.

40 x 6 =

```
4 ones x = 24 ones so that means that 4 tens x = 24 tens which is 240.
```

 $3600 \div 9 =$

```
3600 is the same as 36 hundreds. 36 hundreds ÷ 9 = 4 hundreds
```

Progression

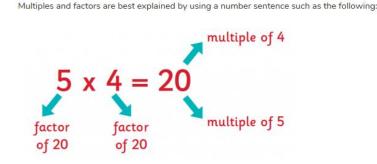

-	
Step

2	How many equal groups (Number)
3	Combining size and number of groups
4	Inefficiency of repeated addition>Multiplication
5	Notation and language of multiplication
6	Multiplication is Commutative
7	Securing times tables facts
8	Use variation to explore and deepen the concept (inc generalisation)
9	Written multiplication

Factors, Multiples, Primes, Squares and Cubes

Throughout primary school, children encounter special numbers. Children should know and use the vocabulary and be confident identifying and working with the numbers relevant to their year group.

A **multiple** is a number that can be divided by another number without a remainder. *A multiple of 3 is a number in the 3x table, a number in the pattern of counting in 3s.*

A **factor** is a number which can be multiplied with another to produce another number. *Factors come in pairs, unless the number is a square number.*

A **prime number** is a number which has only 2 factors, 1 and itself. *It does not appear in any multiplication tables other than its own.*

A square number is a number produced when a number is multiplied by itself. $3 \times 3 = 9 \text{ so } 9$ is a square number. Square numbers have an odd number of factors for this reason.

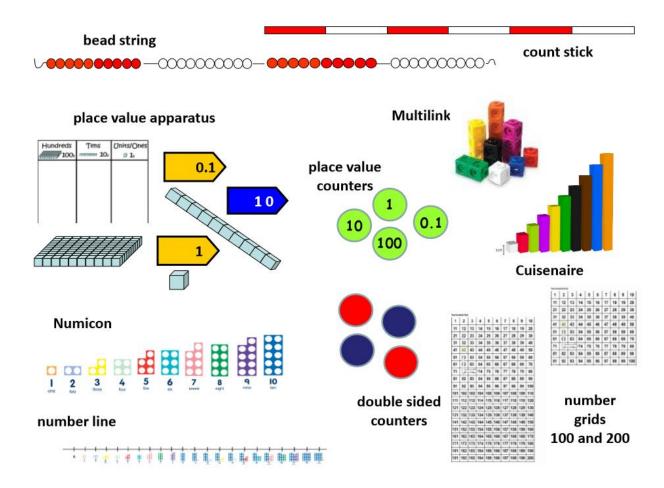

A **cubed number** is a number produced when a number is multiplied by itself and itself again. $3 \times 3 \times 3 = 27$ so 27 is a cubed number.

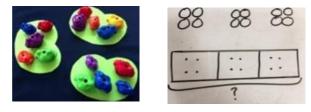

Resources and Images for Multiplication and Division

All learners should use resources and imagery to both develop and show understanding. Particularly in Key Stage One, where there are no formal methods for multiplication and division, children will be working with concrete objects and pictures. Children will record their work and show their methods by drawing pictures.

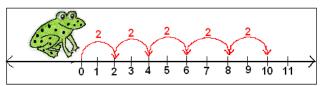

An important first step in the understanding of multiplication and division is understanding the

concept of **equal groups.** Children will first use concrete objects and pictures to show their understanding of this.

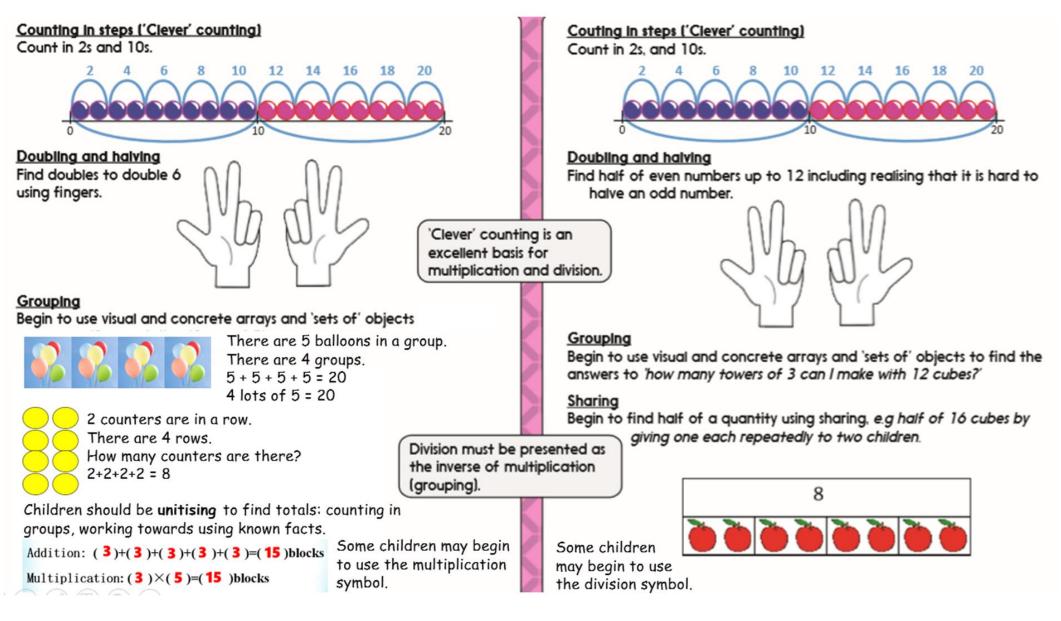

Children will use objects and pictures to show their workings, especially in Key Stage One.

For "clever counting" (counting in steps) a frog may be used to help children understand the strategy of horizontal jumps on a numberline.

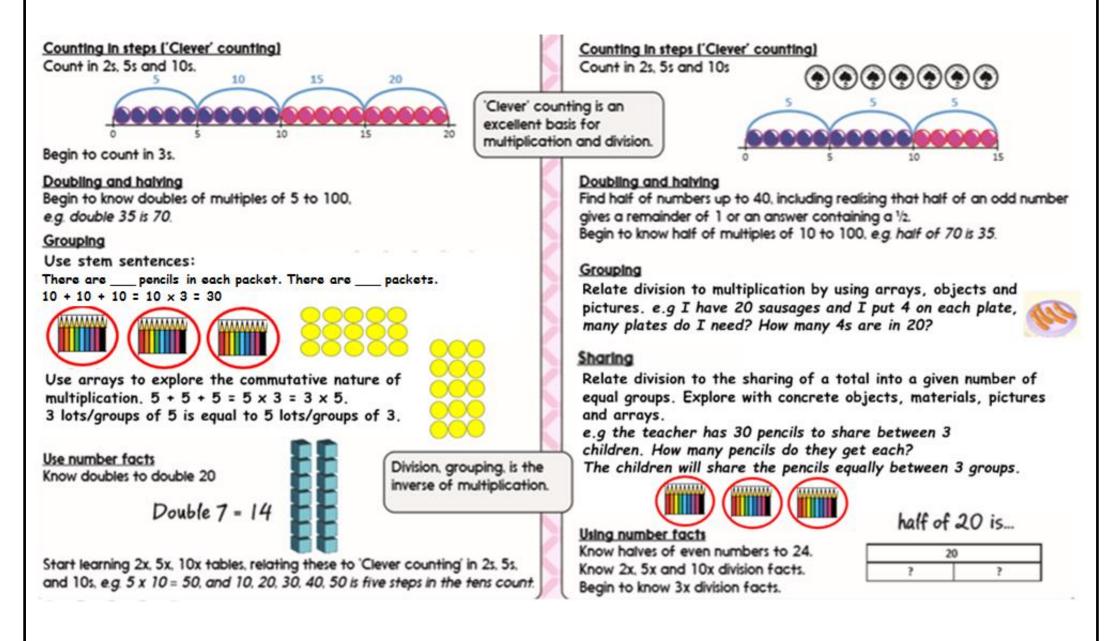

Multiplication

Division

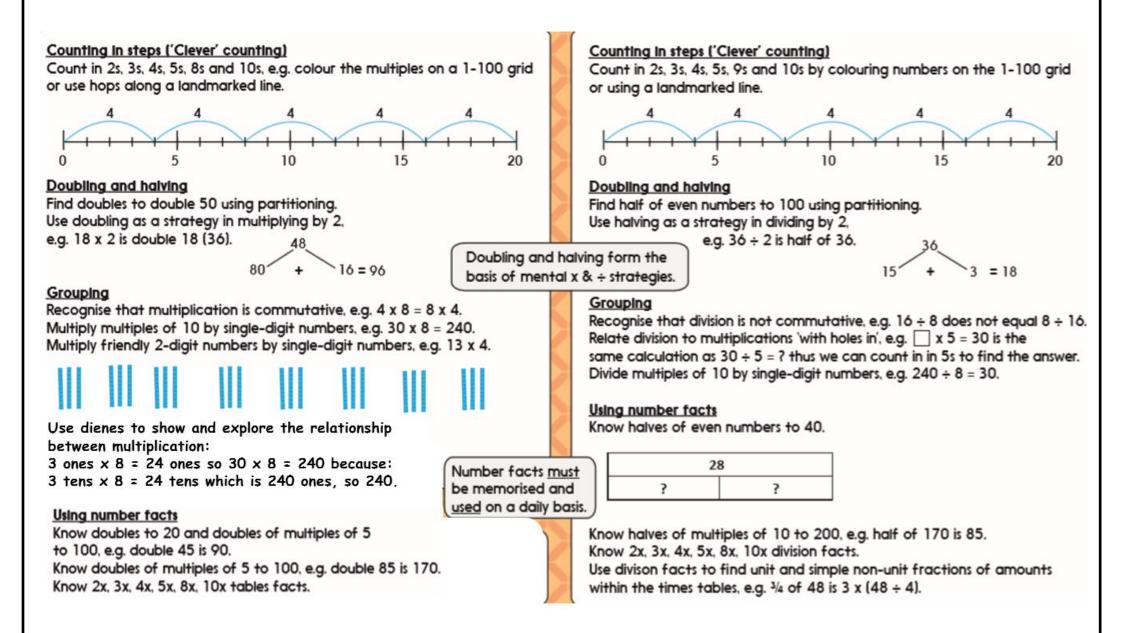

Multiplication

Division

Mental Multiplication

Mental Division

Written Multiplication

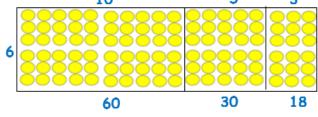

<u>Using arrays to build understanding and make connections</u> Use arrays to help children understand the relationships between calculations.

2 x 3 = 6 4 x 3 = 12

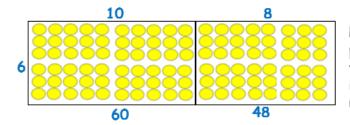

Encourage the exploration of arrays to make connections - that 4 x 3 is double 2 x 3 so the product is also double. What would 8 x 3 be? Why? What would 16 x 3 be? Why?

<u>Progression towards grid multiplication</u> Use arrays to help children understand what the grid method is.

Children can explore partitioning the number in different ways, helping with their understanding of how multiplication tables link together.

Lead towards partitioning into the tens and the ones as in the abstract grid method.

Build on partitioning	g to develop	grid multiplication.
-----------------------	--------------	----------------------

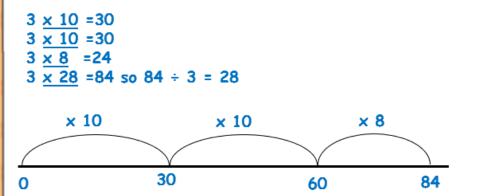

x	20	3	=	
4	80	12	92	

Connect division to multiplication to solve division calculations

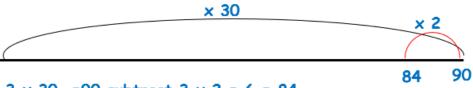

Written Division

84 ÷ 3 = How many 3s in 84?

Use known facts, with numberline to reinforce understanding.

Children can explore with different numberlines to find different ways of solving calculations.

3 <u>x 30</u> =90 subtract 3 <u>x 2</u> = 6 = 84

Connect fractions to division

Understand that fractions relate to division – that tenths is dividing by 10, quarters is dividing by 4 etc

Children will use division methods to find fractions of small amounts:

 $\frac{4}{10} \text{ of } 60 = 60 \div 10 \times 4$

Mental Multiplication

Mental Division

<u>Counting in steps (sequences)</u> Count in 2s, 3s, 4s, 5s, 6s, 7s, 8s, 9s, 10s, 11s, 12s, 25s, 50	s, 100s and 1000s.	Counting in steps (seq Count in 2s, 3s, 4s, 5s, 6		s, 12s, 25s, 50	s, 100s and 1000s.

Written Multiplication

Written Division

Connect division to multiplication to solve division calculations Use grid multiplication to multipy 3-digit by 1-digit numbers. Build on work from year 3 to continue to understand division as the inverse of multiplication, using known facts to solve calculations. 200 50 = 1518If children understand 252 ÷ 3 = How many 3s in 252? 1200 300 place value they can develop fluency. Use known facts and knowledge of partitioning, with a Formal Short Multiplication numberline to reinforce understanding. Move from grid method to short multiplication to multiply 3-digit numbers by 1-digit numbers. 3 x 80 = 240 3 x 4 =12 Use the expanded column method as a bridge 3 x 84 = 252 so 252 ÷ 3 = 84 $127 \times 6 = 762$ from the grid method to the formal short method to demonstrate to children the place x 80 × 4 value. Use it as a teaching point towards children 127 learning the short method. x 6 240 252 0 42 (6x7) Use the language of place value to ensure + 1 2 0 (6x20) understanding. Introduce the formal division layout <u>600</u> (6x100) 6 x 7 ones is 42 ones, which is 4 tens and 2 Using numbers under 100, introduce children to formal division, ones, so the 4 is placed in the tens column and at first using partitioning and known facts. 762 the 2 in the ones column. 10 + 4 = 146 x 2 tens is 12 tens, but we also have 4 tens $98 \div 7 = 14$ already, making 16 tens. 16 tens is 1 hundred 70 + 28 9²8 127 and 6 tens, so we place the 1 in the hundreds column 1 1 6×1 hundred is 6 hundreds, plus the extra Use a place value grid for dividing 1 digit 1 10 100 hundred we already have so we have 7 hundreds. numbers by 10 and 100 8 Identify the value of the digits in each Ensure the digits that are regrouped are written number as ones, tenths and hundredths. 0 +10 under the line in the correct column, smaller than the actual digits in the calculation. 0 •8 ÷100

Year 5 **Mental Multiplication Mental Division** Doubling and halving Doubling and halving Double amounts of money using partitioning, Halve amounts of money using partitioning, e.g. half of £14.84 as half of e.g. £6.73 doubled is double £6 (£12) plus £14 and half of 84p. double 73p (£1.46). £14.84 Use doubling and halving as a strategy in multiplying by 2, 4, 8, 5 and 20, e.g. 58 x 5 = 1/2 of 58 (29) x 10 (290). Partitioning remains a key skill throughout. 42p = £7.42£.7 £6.73 Use doubling and halving as a strategy in dividing by 2, 4, 8, 5 and 20, £1.46 = £13.46£12 + e.g. 115 ÷ 5 as double 115 (230) ÷ 10. Grouping Multiply decimals by 10, 100, 1000, Grouping 0.1s 10s | 1s 100s Divide numbers by 10, 100, 1000 to obtain decimal answers with up to e.g. 3.4 x 100 = 340. three places, e.g. 340 ÷ 100 = 3.4. 3 Use the 10th, 20th, 30th ... multiple of the divisor to divide friendly 2-digit and 3-digit numbers by single-digit numbers, 3 * 44 0 e.g. 186 ÷ 6 as 30 x 6 (180) and 1 x 6 (6). Use partitioning to multiply friendly 2-digit and 3-digit numbers by Find unit and non-unit fractions of large amounts, e.g. 3/5 of 265 is single-digit numbers, e.g. 402 x 6 as 400 x 6 (2400) and 2 x 6 (12). 3 x (265 ÷ 5) Develop understanding of commutative law, associative law and Use the bar model when representing fractions of numbers. distributive law to find "easy" routes to solve Learning times tables 265 calculations involves BOTH multiplication e.q. 5 x 42 x 4 = 42 x 20 = 42 x 10 x 2 53 53 53 53 53 and division facts. $25 \times 84 = 84 \times 100 \div 4 = 8400 \div 4$ Using number facts Using number facts Use division facts from the times tables up to 12 x 12 to divide mutiples Use times tables facts up to 12 x 12 to multiply multiples of the multiplier. of powers of ten of the divisor, e.g. 3600 ÷ 9 using 36 ÷ 9. $6 \times 4 = 24$ so $0.6 \times 4 = 6 \times 4 \div 10 = 2.4$

Written Multiplication

Written Division

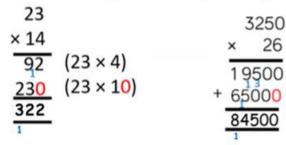

Short divison of 3-digit and 4-digit numbers by single-digit numbers.

Short multiplication of 2-digit, 3-digit and 4-digit numbers by 1-digit numbers.

£1.27		
x 6		
7.62		
1		

Children may use column multiplication to solve money problems though encourage children to use jottings and mental methods. Be clear on the place value of pounds and pence.

Multiply a 2-digit number by a 2-digit number, progressing to the multiplication of 2-digit number by a 3-digit and 4-digit number.

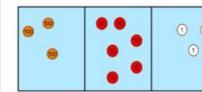

Ensure that children have a clear understanding of why the zero place holder - is needed. Children can use grid multiplication to check their solutions; being confident in both methods is great.

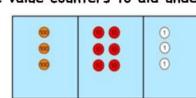

Multiplying fractions

Children should connect multiplying proper and mixed fractions by a whole number to repeated addition and use visuals to aid understanding. 1 sixth

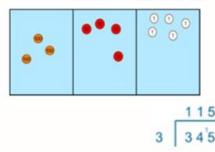

The closer division is linked to multiplication the better.

163 ÷ 3 is seeing "how many groups of 3" are in 163. Children can use counters to make groups of 3. $163 \div 3 = 121$

Children can use counters to help understand exchanging where a full group cannot be made. 345 + 3 =

0000

 $432 \div 5 = 86 r^2$

86r2 $43^{3}2$

Children will learn to express the remainder as a fraction - the remainder divided by the divisor.

$$432 \div 5 = 86\frac{2}{5}$$

Visual images are essential

to multiplying and dividing

fractions.

Children who are struggling to grasp the method from year 4 may use place value counters to aid understanding.

115

12646 7 5 3 4

Understanding how to partition

Division as grouping.

is a key concept.

i.e. the inverse of multiplication,

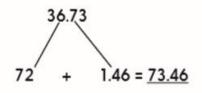

numbers underpins many

calculation strategies.

Mental Multiplication

Doubling and haiving

Double decimal numbers with up to 2-places using partitioning, e.g. 36.73 doubled is double 36 (72) plus double 0.73 (1.46).

Use doubling and halving as strategies in mental multiplication.

Grouping

Use partioning as a strategy in mental multiplication, as appropriate, e.g. 3060×4 as $(3000 \times 4) + (60 \times 4)$ or 8.4×8 as 8×8 (64) and 0.4×8 (3.2)

Use factors in mental multiplication, e.g. 421 x 6 as 421 x 3 (1263) doubled (2526) or 3.42 x 5 as half of 3.42 x 10.

Mutliply decimal numbers using near multiples by rounding, e.g. 4.3×19 as 4.3×20 (86 - 4.3).

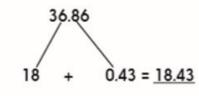

Using number facts Use times tables facts up to 12 x 12 in mental multiplication of large numbers or numbers with up to two decimal places.

e.g. 6 x 4 = 24 and 0.06 x 4 = 0.24.

Mental Division

Doubling and halving

Halve decimal numbers with up to 2-places using partitioning, e.g. half of 36.86 if half of 36 (18) plus half of 0.86 (0.43).

Use doubling and halving as strategies in mental division, e.g. $216 \div 4$ is half of 216 (108) and half of 108 (54).

Grouping

Use 10th, 20th, 30th, ... or 100th, 200th, 300th ... multiples of the divisor to divide large numbers, e.g. $378 \div 9$ as $40 \ge 9 = 360$ and $2 \ge 9 = 18$ so, the answer is 42.

 $378 \div 9 = _ x 9 = 378 = 9 x _ = 378$ $9 \times 40 = 360$ $9 \times 2 = 18$ $9 \times 42 = 378$ so $378 \div 9 = 42$

Use test for divisibility, e.g. 135 divides by 3 as 1 + 3 + 5 = 9 and 9 is in the 3x table.

Using number facts

Use division facts from the multiplication tables to help divide decimal numbers by single digit numbers e.g. $9.6 \div 8 = 96 \div 8 \div 10 = 12 \div 10 = 1.2$

Year 6 Written Division Written Multiplication Short multiplication of 2-digit, 127 Short division of 3-digit and 4-digit numbers by single-digit numbers. 3-digit and 4-digit numbers <u>x 6</u> 762 by 1-digit numbers. Short versions of multiplication 1264 6 7¹5³8²4 and division are more important and useful than the long versions. Long multiplication of 2-digit, 3250 Use knowledge of factor pairs to solve division calculations including 3-digit and 4-digit numbers × 26 3-digit and 4-digit by a 2-digit number then use short division by 2-digit numbers. 19500 + 65000 $7848 \div 4 \div 6$ 84500 7,848 ÷ 24 $7848 \div 2 \div 2 \div 6$ $2848 \div 2 \div 12$ Short multiplication of decimal numbers using x 100 and ÷100, e.g. 13.72 x 6 as 1372 x 6 ÷100. £1.27 Long division of 3-digit and 4-digit numbers by two-digit numbers. Short multiplication of money, £<u>7.62</u> e.g. £13.72 x 6 or £23.67 x 3. 200+50+1 x10 x100 15 0 0 15 3 7 6 5 Children write out the multiples and 30 0 0 add a column for x10 and x100. 3000 45 0 0 They pick the closest number to that Multiply proper and improper fractions by fractions, by using images 765 60 0 0 being divided, writing the number of

to support understanding. Children should be encouraged to see the relationship between x and of.

 $\frac{1}{3} \times \frac{1}{2} = \frac{1}{6}$ $\frac{1}{3} of \frac{1}{2} = \frac{1}{6}$

 $\frac{4}{5} \times \frac{2}{3} = \frac{8}{15}$ When children understand, they can apply to larger

non-unit fractions.

context to support understanding. $\frac{1}{6} \div 3 = \frac{1}{6} \div \frac{3}{1} = \frac{1}{6} \times \frac{1}{3} = \frac{1}{18}$
