

Hayward's Primary School Calculation Policy 2023

Hayward's Maths Vision

At Hayward's, we strive for all children to develop a positive attitude to Maths as an interesting and valuable subject; we do not want children to fear Maths yet have a belief that they can achieve highly.

We strive for all children to become confident when talking about their mathematics, using reasoning – apparatus, diagrams and explanations – to show their understanding; we have high expectations of children's use of mathematical language.

We strive for all children to understand that Maths is not only the quick recall or computation of number facts – although these are fundamental – but that it is the considered thought and application using what they know to work through a problem; we want children to feel confident when solving problems.

We strive for all children to develop a range of efficient strategies – their own tool kits – and make choices about how to use their maths; we want children to make decisions and explain them.

We strive for all children to feel challenged but enthused by Maths; we want every child to enjoy and succeed as Mathematicians, understanding its very important place in our world.

Aims

The national curriculum for mathematics aims to ensure that all pupils:

- become fluent in the fundamentals of mathematics, including through varied and frequent practice with increasingly complex problems over time, so that pupils develop conceptual understanding and the ability to recall and apply knowledge rapidly and accurately
- reason mathematically by following a line of enquiry, conjecturing relationships and generalisations, and developing an argument, justification or proof using mathematical language
- can solve problems by applying their mathematics to a variety of routine and non-routine problems with increasing sophistication, including breaking down problems into a series of simpler steps and persevering in seeking solutions

Guidance for following the Calculation Policy

Written methods of calculations are based on mental strategies.

Each of the four operations builds on mental skills which provide the foundation for jottings and informal written methods of recording.

Skills need to be taught, practised and reviewed constantly. These skills lead on to more formal written methods of calculation.

Strategies for calculation need to be represented by models and images to support, develop and secure understanding. This, in turn, builds fluency.

When teaching a new strategy, it is important to start with numbers that the child can easily manipulate so that they can understand the methodology.

The transition between stages should not be hurried as not all children will be ready to move on to the next stage at the same time, therefore the progression in this document is outlined in stages.

Previous stages may need to be revisited to consolidate understanding when introducing a new strategy.

A sound understanding of the number system is essential for children to carry out calculations efficiently and accurately.

Our Methodology

At Hayward's, we want children to become confident in choosing the most efficient methods to solve a calculation. In many cases, children will have more than one method "up their sleeve" to find the solution to a calculation and will be able to pick the best one.

For children to be able to work with the columnar methods, we want children to have a sound understanding of place value. Many calculations should be solved mentally and/or with jottings; formal column methods are for calculations where the digits are varied and include regrouping or exchanging.

Correct Terminology

Correct	Avoid	
regrouping	carrying	
exchanging	borrowing/stealing	
ones	units	
calculation / equation	sum	
is equal to / the same as	equals	
unknown	answer	

Calculation policy: Addition and Subtraction

Key language for addition: sum, total, parts and wholes, plus, add, altogether, more, 'is the same as' Key language for subtraction: take away, subtract, find the difference, fewer, less than

Addition and subtraction are inverse operations. Right from the start, children should be taught these as related operations. There are four number sentences (two using + and two using -) which can be written to express the relationship between 4 and 6 and 10. It is key to a good understanding of addition and subtraction that 6 + [] = 10 and 10 - 6 = [] are seen as ways of expressing the same question. Children should be encouraged to use inverse operations to check their solutions. Part-Whole models and bar models are visuals that show the relationship. It is also important to relate addition and subtraction to place value.

A digit's true value should always be referenced.

Here is an example of language used to teach and talk through column addition:

- Approximately, what will 245 + 378 be the same as? Let's use rounding to estimate.
- I have 5 ones and I am adding 8 ones so now I have 13 ones which I can regroup or repartition as 1 ten and 3 ones.
- Next, I have 6 tens and I am adding 7 tens but I also have 1 ten from regrouping which makes 14 tens. I
 can regroup this as 1 hundred and 4 tens.
- Finally: 2 hundreds add 3 hundreds add 1 hundred from regrouping makes 6 hundreds.
- 243 + 368 is equal to 611.
- How could I write this as a subtraction?

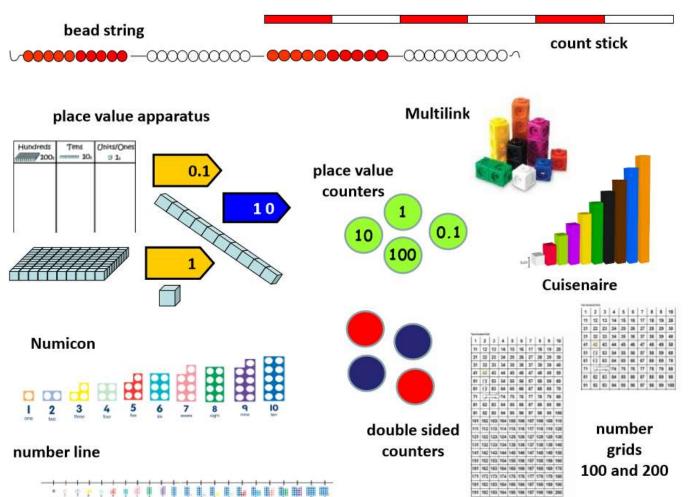

Resources and Images for Addition and Subtraction

All learners should use resources and imagery to both develop and show understanding.

Children should regularly draw pictures showing real life contexts for problems which they are

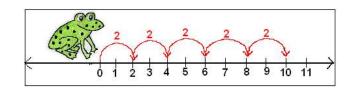

solving. In order to help children remember certain strategies, certain

references will be used throughout the school:

11 12 13 14 15 21 22 23 24 25 31 32 33 34 35 41 42 43 44 45

A spider may be used to help children understand the strategy of vertical jumps on a number square.

A frog may be used to help children understand the strategy of horizontal jumps on a numberline.

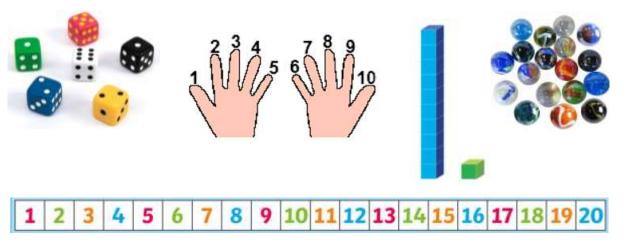

EYFS

Age Band Statements (40-60 months)

- Recognises numerals 1 to 5
- Recognise some numerals of personal significance
- Counts up to three or four objects by saying one number name for each item
- Counts actions or objects which cannot be moved
- Counts objects to 10 and beginning to count beyond 10
- Counts out up to six objects from a larger group
- Selects the correct numeral to represent 1 to 5, then 1 to 10 objects
- Counts an irregular arrangement of up to ten objects
- Estimates how many objects they can see and checks by counting them
- Uses the language of 'more' and 'fewer' to compare two sets of objects
- Finds the total number of items in two groups by counting all of them
- Says the number that is one more than a given number
- Finds one more or one less from a group of up to five objects, then ten objects
- In practical activities and discussion, beginning to use the vocabulary involved in adding and subtracting
- Records, using marks that they can interpret and explain

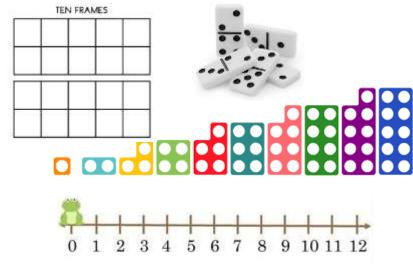

Apparatus is key in helping children to achieve the age band statements. Children should be encouraged to show their understanding through the full range of apparatus. Children should also be encouraged to draw their own pictures to help to

achieve and show their understanding of the statements.

Early Learning

Children count reliably with numbers from 1 to 20, place them in order and say which number is one more or one less than a given number. Using quantities and objects, they add and subtract two single-digit numbers and count on or back to find the answer. They solve problems, including doubling, halving and sharing.

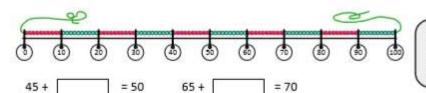

Addition

Subtraction

Using place value

Count on in ones/counting in tens, e.g. knowing 45 + 1 or 45 + 10without counting on in ones.

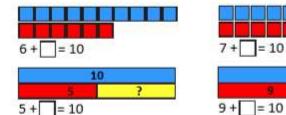

Counting on

Count on in ones, e.g. 11 + 2 = and 7 + 4 =Count on in tens, e.g. 45 + 20 as 45, 55, 65

Using number facts

'Story' of 4, 5, 6, 7, 8 and 9, e.g. 7 = 7 + 0 or 6 + 1 or 5 + 2 or 4 + 3. Number bonds to 10, e.g. 5+5, 6+4, 7+3, 8+2, 9+1, 10+0.

10

Using place value

Count back in 1s/Count back in 10s. Say one less than any number to 100. Say 10 less without counting back in ones.

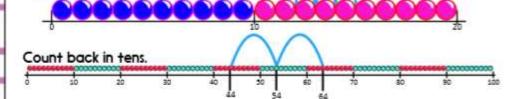

Bead strings and 1-100 number grid help counting on/back in tens.

	1	2	3	4	5	N
	11	12	13	14	15	3
	21	22	23	24	25	3
	31	325	0	34	35	3
	41	42	43	44	45	1
4	2				_	7

Subtracting by taking away

Count back in ones. e.g. 15 - 3 = 25 - 3 =

Using number facts

Story of 4, 5, 6, 7, 8 and 9, e.g. 7 - 1 = 6, 7 - 2 = 5, 7 - 3 = 4, etc. Number bonds to 10, e.g. 10 - 1 = 0, 10 - 2 = 8, 10 - 3 = 7, etc.

Missing number sentences, 3 + [] = 7, link addition and subtraction.

Patterns using known facts,

e.g. 10 - 7 = 3 so we know 30 - 7 = ?

Bead strings and 1-100

on/back in tens.

number grid help counting

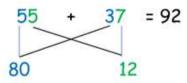

Addition

Subtraction

Using place value

Know 1 more or 10 more than any number, e.g. 1 more than 67 or 10 more than 85.

Partitioning, e.g. 55 + 37as 50 + 30 and 5 + 7finally combining the two totals: 80 + 12.

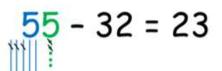

Using place value

Know 1 less or 10 less than any number, e.g. 1 less than 74 or 10 less than 82.

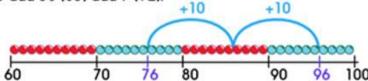

Partitioning. e.g. 55 - 32 as 50 - 30

and 5 - 2 combining the answers: 20 + 3.

Counting on

Add ten and mupltiples of ten, e.g. 76 + 20 as 76, 86, 96 or in one hop 76 + 20. Add two 2-digit numbers by counting on in tens and then in ones, e.g. 55 + 37 as 55 add 30 (85) add 7 (92).

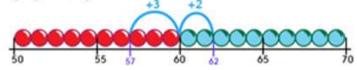

Add near multiples, e.g. 46 + 19 or 63 + 21.

Using number facts

Know pairs of numbers which make the numbers up to and including 10, e.g. 8 = 4&4, 3&5, 2&6, 1&7 and 10 = 5&5, 4&6, 3&7, 2&8, 1&9, 0&10. Patterns of known facts, e.g. 6 + 3 = 9, so we know 36 + 3 = 39, 66 + 3 = 69, 53 + 6 = 59.

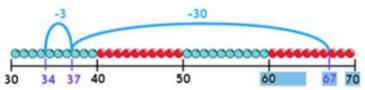

Bridging ten. e.g. 57 + 5 as 57 add 3 then add 2 more.

Missing number sentences, 3 + [] = 7, link addition and subtraction.

Taking away

Subtract ten and multiples of ten, e.g. 76 - 20 as 76, 66, 56 or in one hop 76 - 20 = 56. Subtract two 2-digit numbers by counting back in tens then in ones, e.g. 67 - 33 as 67 subtract 30 (37) then count back 3 (34).

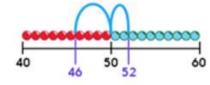

Subtracting near multiples, e.g. 74 - 21 or 57 - 19.

Using number facts

Know pairs of numbers which make the numbers up to and including 10. e.g. 10 - 6 = 4, 8 - 3 = 5, 5 - 2 = 3, etc.

Patterns of known facts, e.g. 9 - 6 = 3, so we know 39 - 6 = 33, 69 - 6 = 63, 89 - 6 = 83.

Bridge ten. e.g. 52 - 6 as 52 subtract 2 then subtract 4 more.

Adding three or more single-digit numbers, spotting bonds to 10 or doubles, e.g. 6 + 7 + 4 + 2 as 10 + 7 + 2.

Counting up

Find a difference between two numbers on a line, e.g. 51 - 47.

Subtraction is both taking

away and - importantly -

difference.

Addition

Using place value

Count in hundreds, e.g. knowing 475 + 200 as 475, 575, 675.

Add multiples of 10, 100 and £1, e.g. 746 + 200 or 746 + 40 or £6.34 + £5 as £6 + £5 and 34p.

Partitioning, e.g. 68 + 74 as 60 + 70 and 8 + 4 and combine the totals: 130 + 12 = 142

Or £8.50 + £3.70 as £8 + £3 and 50p + 70p and combine: £11 + £1.20.

Counting on

Add 2-digit numbers by adding the multiple of ten then the ones, e.g. 67 + 55 as 67 add 50 (117) add 5 (122).

Add near multiples of 10 and 100, e.g. 67 + 39 or 364 + 199.

Count on from 3-digit nos, e.g. 247 + 34 as 247 + 30 (277) then 277 + 4 = 281.

Using number facts

Number bonds to 100, e.g. 35 + 65, 46 + 54, 73 + 27, etc.

1	100
65	35

Add to next ten and next hundred, e.g. 176 + 4 = 180, 435 + 65 = 500, etc.

Subtraction

Taking away

Use place value to subtract, e.g. 358 - 300 or 348 - 40 or 348 - 8. Taking away multiples of 10, 100 and £1, e.g. 476 - 40 = 436.

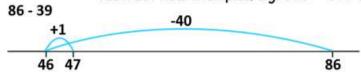

476 - 300 = 176, £4.76 - £2 = £2.76.

Partitioning, e.g. 68 – 42 as 60 – 40 and 8 – 2 or £6.84 - £2.40 as £6 - £2 and 80p – 40p.

Count back in hundreds, tens and then ones,

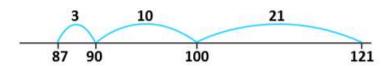

e.g. 763 – 121 as 763 – 100 (663) then subtract 20 (643) then subtract 1 (642).

Subtract near multiples, e.g. 648 - 199 or 86 - 39.

Counting up

Find a difference between two numbers by counting up from the smaller to the larger, e.g. 121 – 87.

Using number facts

Number bonds to 100, e.g. 100 - 35 = 65, 100 - 48 = 52, etc.

We no longer count in 1s but use PV and number facts.

	100	
48	?	

Written Addition

Written Subtraction

Written methods

Build on partitioning to develop expanded column addition with two 3-digit numbers.

Expanded column addition with 'carrying'.

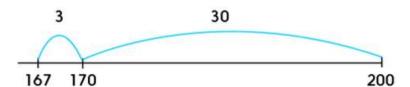

Compact column addition with two or more 3-digit numbers or towers of 2-digit numbers.

Compact column addition with 3-digit numbers

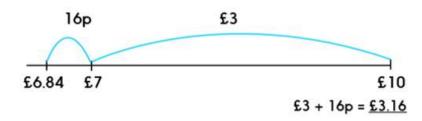

Recognise fractions which add to 1, e.g. $\frac{1}{4} + \frac{3}{4} = 1$ or $\frac{2}{5} + \frac{3}{5} = 1$

Develop counting up subtraction.

Counting up subtraction is a crucial mental strategy.

Use counting up subtraction to find change from £1 and £10.

Expanded column subtraction, moving onto exchanging when ready:

Important to see the visual image of fractions totalling one whole.

$$\begin{array}{r} 100 + 150 + 8 \\ - 70 + 3 \\ \hline 100 + 80 + 5 = 185 \end{array}$$

You might replace the + sign with the word 'and' to avoid confusion.

Addition

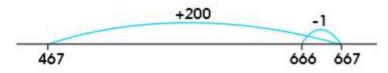

Using place value

Count in thousands, e.g. knowing 475 + 200 as 475, 575, 675. Partitioning, e.g. 746 + 203 as 700 + 200 and 46 + 3 or 134 + 707 as 130 + 700 and 4 + 7.

PV and number facts are central to mental strategies.

Counting on

Add 2-digit numbers by adding the multiple of ten then the ones, e.g. 67 + 55 as 67 add 50 (117) add 5 (122). Add near multiples of 10, 100 and 1000, e.g. 467 + 199 or 3462 + 2999.

Count on to add 3-digit numbers and money, e.g. 463 + 124 as 463 + 100(563) + 20(583) + 4 = 587 or £4.67 + £5.30 as £9.67 add 30p.

Using number facts

Number bonds to 100 and to next multiple of 100, e.g. 463 + 37, 1353 + 47.

Number bonds to £1 and to the next whole pound, e.g. £3.45 \pm 55p.

Add to the next whole number, e.g. 4.6 + 0.4 or 7.2 + 0.8.

Subtraction

Taking away

Use place value to subtract, e.g. 4748 - 4000 or 4748 - 8, etc.

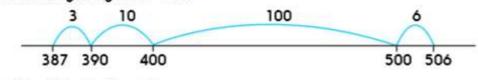

Take away multiples of 10, 100, 1000, £1, 10p or 0.1, e.g. 8392 - 50 or 6723 - 3000 or £3.74 - 30p or 5.6 - 0.2.

Partioning, e.g. £5.87 - £3.04 as £5 - £3 and 7p - 4p or 7493 - 2020 as 7000 - 2000 and 90 - 20.

Count back, e.g. 6482 - 1301 as 6482 - 1000, then - 300, then -1 (5181) Subtract near multiples, e.g. 3522 - 1999 or £34.86 - £19.99.

Counting up

Find a difference between two numbers by counting up from the smaller to the larger, e.g. 506 - 387.

100 + 10 + 6 + 3 - 119

Using number facts

Number bonds to 10, 100 and derived facts, e.g. 100 - 76 = 24, 1.0 - 0.6 = 0.4.

Counting up is essential for money calculations and, later, decimals.

100	-
76	24

Number bonds to £1 and £10, e.g. £1.00 - 86p = 14p or £10 - £3.40 = £6.60.

Written Addition

Written Subtraction

Build on expanded column addition to develop compact column addition with larger numbers.

Expanded methods firm up a robust understanding of place value. Expanded column subtraction.

Begin to use column subtraction.

Compact column addition with larger numbers.

$$5347
2286
+ 1495
9128
1 2 1$$

Use expanded and compact column addition to add amounts of money, e.g. £3.24 + £2.58.

Add like fractions, e.g. $\frac{3}{8} + \frac{2}{8} + \frac{1}{8}$

Use counting up subtraction to find change from £10, £20, £50 and £100, e.g. £100 - £73.60.

Subtract like fractions, e.g
$$\frac{7}{8} - \frac{2}{8} + \frac{5}{8}$$

Stress that decimals and fractions are parts of a whole.

Addition

Subtraction

Using place value

Count in 0.1s, 0.01s, e.g. knowing what 0.1 more than 0.51 is.

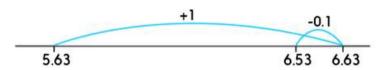

Partitioning, e.g. 2.4 + 5.8 as 2 + 5 and 0.4 + 0.8 and combine the totals: 7 + 1.2 = 8.2.

Subtracting by counting up is much less error prone.

Counting on

Add two decimal numbers by adding the ones then the tenths/hundredths, e.g. 5.72 + 3.05 as 5.72 add 3 (8.72) then add 0.05 (8.77). Add near multiples of 1, e.g. 6.34 + 0.99 or 5.63 + 0.9.

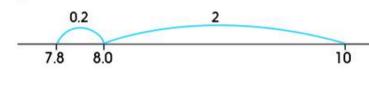

Count on from large numbers, e.g. 6834 + 3005 as 9834 + 5.

Using number facts

Number bonds to 1 and to the next whole number, e.g. 0.4 + 0.6or 5.7 + 0.3.

Add to the next ten from a decimal number. e.g. 7.8 + 2.2 = 10.

Knowledge of number bonds underpins mental stratgegies.

2 + 0.2 = 2.2

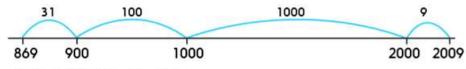

Taking away

Using place value to subtract decimals, e.g. 4.58 - 0.08 or 6.26 - 0.2, etc. Take away multiples of powers of 10, e.g. 15, 672 - 300 or 4.82 - 2 or 2.71 - 0.5 or 4.68 - 0.02.

Partition or count back, e.g. 3964 - 1051 or 5.72 - 2.01. Subtract near multiples, e.g. 86,456 - 9999 or 3.58 - 1.99.

Counting up

Find a difference between two numbers by counting up from the smaller to the larger, e.g. 2009 - 869.

1000 + 100 + 31 + 9 - 1140

Find change using shopkeepers' addition, e.g. buy toy for £6.89 using £10.

Using number facts

Derived facts from number bonds to 10 and 100, e.g. 2 - 0.45 using 45 + 55 = or 100 or 3.00 - 0.86 using 86 + 14 = 100.

Number bonds to £1, £10 and £100, e.g. £4.00 - £3.86p = 14p or £100 - £66 using 66 + 34 = £100.

Written Addition

Written Subtraction

Compact column subtraction for numbers with up to 5 digits,

Expanded column addition for money leading to compact column addition for adding several amounts of money.

Expanded version first embeds understanding of place value.

Compact column addition to add pairs of 5-digit numbers.

Continue to use column addition to add towers of several larger numbers.

+8 minutes

14:52

Use compact addition to add decimal numbers with up to two places.

Adding fractions with related denominators,

$$\frac{8}{4} + \frac{1}{8} = \frac{3}{8}$$

Number lines are useful when working with time. You don't have to think about the columns.

Equivalent fractions are the basis for + and fractions.

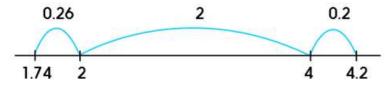

e.g. 16,324 - 8516.

Continue to use counting up subtraction for subtractions involving money, including finding change or, e.g. £50 - £28.76.

Use counting up subtraction to subtract decimal numbers, e.g. 4.2 - 1.74.

$$2 + 0.26 + 0.2 = 2.46$$

Subtracting fractions with related denominators,

e.g.
$$\mathbf{1} \frac{1}{4} - \frac{3}{8} = \mathbf{1} \frac{2}{8} - \frac{3}{8} = \frac{10}{8} - \frac{3}{8} = \frac{7}{8}$$

Knowledge of number bonds underpins mental strategies.

Addition

Subtraction

Using place value

Count in 0.1s, 0.01s, 0.001s, e.g. knowing what 0.001 more than 6.725 is. Partitioning, e.g. 9.54 + 3.25 as 9 + 3 and 0.5 + 0.2 and 0.04 + 0.05 to get 12.79.

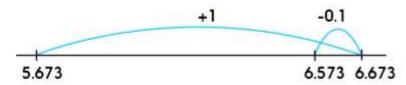

10s	1s		0.1s 1/10s	0.015 1/1005
	9		5	4
	3	•	2	5
1	2	+	7	0

Subtracting by counting up is much less error prone.

Counting on

Add two decimal numbers by adding the ones then the tenths/hundredths or thousandths, e.g. 6.314 + 3.006 as 6.314 add 3(9.314) then add 0.006(9.32).

Add near multiples of 1, e.g. 6.345 + 0.999 or 5.673 + 0.9.

Count on from large numbers, e.g. 16,375 + 12,003.

Using number facts

Number bonds to 1 and to the next multiple of 1, e.g. 0.63 + 0.37 or 2.355 + 0.645. Add to next ten, e.g. 4.62 + 0.38.

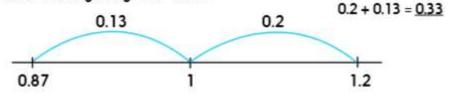

Taking away

Use place value to subtract decimals, e.g. 7.782 - 0.08 or 16.263 - 0.2, etc. Take away multiples of powers of 10, e.g. 132,956 - 400 or 686,109 - 40,000 or 7.823 - 0.5.

Parition or count back, e.g. 3964 - 1051 or 5.72 - 2.01. Subtract near multiples, e.g. 360,078 - 99,998 or 12.831 - 0.99.

Counting up

Count up to subtract numbers from multiples of 10, 100, 1000, 10,000 Find a difference between two decimal numbers by counting up from the smaller to the larger, e.g. 1.2 - 0.87.

Using number facts

Derived facts from number bonds to 10 and 100, e.g. 0.1 - 0.075 using 75 + 25 = 100 or 5 - 0.65 using 65 + 35 = 100.

Number bonds to £1, £10 and £100, e.g. £7.00 - £4.37 or £100 - £66.20 using 20p + 80p = £1 and £67 + £33 = £100.

£100	
£67	£33

Written Addition

Written Subtraction

Compact column addition for adding several large numbers and decimals with up to two places.

Compact column addition with money.

Children must be able to do expanded as well as compact to show understanding.

Adding fractions with unlike denominators

$$\frac{3}{4} + \frac{1}{3} = 1\frac{1}{12}$$
 or $2\frac{1}{4} + 1\frac{1}{3} = 3\frac{7}{12}$

$$\frac{3}{4} + \frac{1}{3}$$

$$\frac{9}{4} + \frac{4}{3}$$

$$= \frac{9}{12} + \frac{4}{12} \qquad = \frac{27}{12} + \frac{16}{12}$$

$$=\frac{13}{12}$$
 $=\frac{4}{12}$

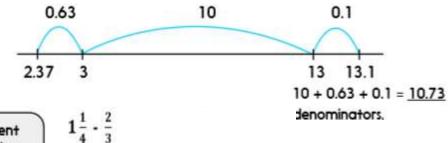

$$= 1\frac{1}{12} = 3\frac{7}{12}$$

Compact column subtraction for large numbers.

Use counting up subtraction when dealing with money. e.g. £100 – £78.56 or £45.23 - £27.57.

Use counting up subtraction to subtract decimal numbers, e.g. 13.1 - 2.37.

Understanding equivalent fractions is absolutely key here.

$$=\frac{5}{4}-\frac{2}{3}$$

Subtracting fractions with unlike denominators.

$$=\frac{15}{12}-\frac{8}{12}$$

$$=\frac{7}{12}$$

Calculation policy: Multiplication and Division

Key language for multiplication: multiply, times, factor, multiple, product, groups of, lots of, equal Key language for division: divide, share, group, sharing, grouping, equal

Multiplication and division are inverse operations. Right from the start, children should be taught these as related operations. There are four number sentences (two using x and two using \div) which can be written to express the relationship between 5 and 9 and 45. It is key to a good understanding of division that [] x 5 = 45 and 45 \div 5 = [] are seen as ways of expressing the same question. Like in addition and subtraction, equations can be written with the "equals" symbol not necessarily at the end of an equation: $5 = 45 \div 9$.

The **product** is the number made when two (or more) numbers are multiplied together. Children should use the word **product** from Key Stage One. **Factors** are the numbers that can be multiplied to make a **product**. It is also important to relate multiplication and division to place value.

A digit's true value should always be referenced.

Here are some examples of how linking back to place value can support the teaching of multiplication and division.

 $40 \times 6 =$

4 ones x 6 = 24 ones so that means that 4 tens x 6 = 24 tens which is 240.

 $3600 \div 9 =$

3600 is the same as 36 hundreds. 36 hundreds \div 9 = 4 hundreds

Progression

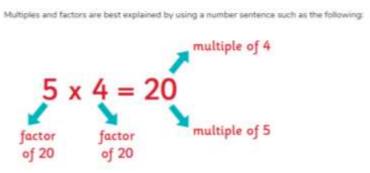

Step	
1	Equal groups (Size)
2	How many equal groups (Number)
3	Combining size and number of groups
4	Inefficiency of repeated addition -> Multiplication
5	Notation and language of multiplication
6	Multiplication is Commutative
7	Securing times tables facts
8	Use variation to explore and deepen the concept (inc generalisation)
9	Written multiplication

Factors, Multiples, Primes, Squares and Cubes

Throughout primary school, children encounter special numbers. Children should know and use the vocabulary and be confident identifying and working with the numbers relevant to their year group.

A **multiple** is a number that can be divided by another number without a remainder. A multiple of 3 is a number in the 3x table, a number in the pattern of counting in 3s.

A **factor** is a number which can be multiplied with another to produce another number. Factors come in pairs, unless the number is a square number.

A **prime number** is a number which has only 2 factors, 1 and itself. It does not appear in any multiplication tables other than its own.

A **square number** is a number produced when a number is multiplied by itself. $3 \times 3 = 9 \text{ so } 9 \text{ is a square number}$. Square numbers have an odd number of factors for this reason.

A **cubed number** is a number produced when a number is multiplied by itself and itself again. $3 \times 3 \times 3 = 27$ so 27 is a cubed number.

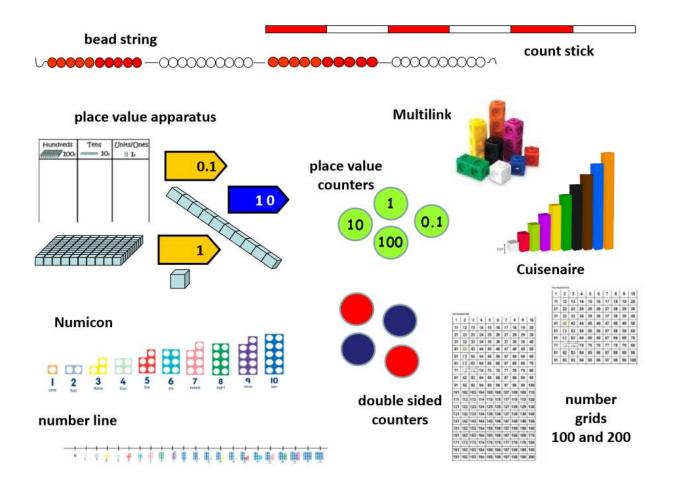

Resources and Images for Multiplication and Division

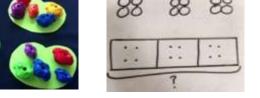

All learners should use resources and imagery to both develop and show understanding. Particularly in Key Stage One, where there are no formal methods for multiplication and division, children will be working with concrete objects and pictures. Children will record their work and show their methods by drawing pictures.

An important first step in the understanding of multiplication and division is understanding the

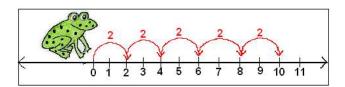

concept of equal groups. Children will first use concrete objects and

pictures to show their understanding of this.

Children will use objects and pictures to show their workings, especially in Key Stage One.

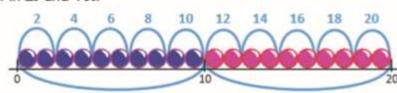

For "clever counting"
(counting in steps) a
frog may be used to help
children understand the
strategy of horizontal jumps
on a numberline.

Multiplication

Division

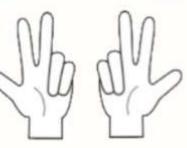

Counting in steps ('Clever' counting)

Count in 2s and 10s.

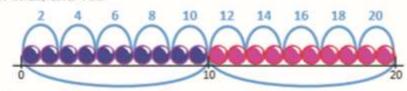

Doubling and halving

Find doubles to double 6 using fingers.

Couting in steps ('Clever' counting)

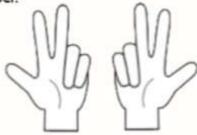

Count in 2s, and 10s.

Doubling and halving

Find half of even numbers up to 12 including realising that it is hard to halve an odd number.

'Clever' counting is an excellent basis for multiplication and division.

Grouping

Begin to use visual and concrete arrays and 'sets of' objects

There are 5 balloons in a group.

There are 4 groups. 5 + 5 + 5 + 5 = 20

4 lots of 5 = 20

2 counters are in a row.

There are 4 rows.

How many counters are there?

2+2+2+2 = 8

Grouping

Begin to use visual and concrete arrays and 'sets of' objects to find the answers to 'how many towers of 3 can I make with 12 cubes?'

Sharing

Begin to find half of a quantity using sharing, e.g half of 16 cubes by giving one each repeatedly to two children.

8

Division must be presented as the inverse of multiplication (grouping).

Children should be unitising to find totals: counting in groups, working towards using known facts.

Addition: (3)+(3)+(3)+(3)+(3)=(15)blocks

Multiplication: (3)×(5)=(15)blocks

Some children may begin to use the multiplication symbol.

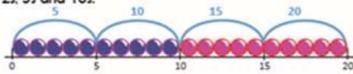

Some children may begin to use the division symbol.

Multiplication

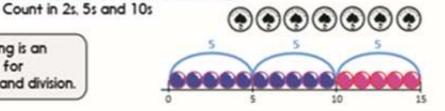

Division

Count in 2s, 5s and 10s.

'Clever' counting is an excellent basis for multiplication and division.

Begin to count in 3s.

Doubling and halving

Begin to know doubles of multiples of 5 to 100, e.g. double 35 is 70.

Grouping

Use stem sentences:

There are ___ pencils in each packet. There are ___ packets.

10 + 10 + 10 = 10 x 3 = 30

Use arrays to explore the commutative nature of multiplication. $5 + 5 + 5 = 5 \times 3 = 3 \times 5$. 3 lots/groups of 5 is equal to 5 lots/groups of 3.

Doubling and halving

Counting in steps ('Clever' counting)

Find half of numbers up to 40, including realising that half of an odd number gives a remainder of 1 or an answer containing a ½.

Begin to know half of multiples of 10 to 100, e.g. half of 70 is 35.

Sharing

Grouping

Relate division to the sharing of a total into a given number of equal groups. Explore with concrete objects, materials, pictures and arrays.

Relate division to multiplication by using arrays, objects and

pictures, e.g I have 20 sausages and I put 4 on each plate,

many plates do I need? How many 4s are in 20?

e.g the teacher has 30 pencils to share between 3 children. How many pencils do they get each?
The children will share the pencils equally between 3 groups.

Use number facts
Know doubles to double 20

Double 7 = 14

Division, grouping, is the inverse of multiplication.

half of 20 is...

Using number facts

Know halves of even numbers to 24. Know 2x, 5x and 10x division facts. Begin to know 3x division facts.

20		
?	?	

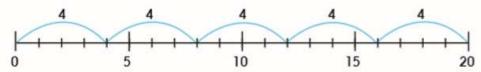

Start learning 2x, 5x, 10x tables, relating these to 'Clever counting' in 2s, 5s, and 10s, e.g. $5 \times 10 = 50$, and 10, 20, 30, 40, 50 is five steps in the tens count.

Mental Multiplication

Mental Division

Counting in steps ('Clever' counting)

Count in 2s, 3s, 4s, 5s, 8s and 10s, e.g. colour the multiples on a 1-100 grid or use hops along a landmarked line.

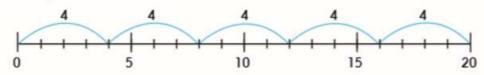

Doubling and halving

Find doubles to double 50 using partitioning. Use doubling as a strategy in multiplying by 2, e.g. 18 x 2 is double 18 (36).

Counting in steps ('Clever' counting)

Count in 2s, 3s, 4s, 5s, 9s and 10s by colouring numbers on the 1-100 grid or using a landmarked line.

Doubling and halving

Find half of even numbers to 100 using partitioning. Use halving as a strategy in dividing by 2,

e.g. $36 \div 2$ is half of 36.

Grouping

Recognise that multiplication is commutative, e.g. $4 \times 8 = 8 \times 4$. Multiply multiples of 10 by single-digit numbers, e.g. $30 \times 8 = 240$. Multiply friendly 2-digit numbers by single-digit numbers, e.g. 13×4 .

Use dienes to show and explore the relationship between multiplication:

3 ones \times 8 = 24 ones so 30 \times 8 = 240 because: 3 tens \times 8 = 24 tens which is 240 ones, so 240.

Grouping

Doubling and halving form the basis of mental x & ÷ strategies.

Recognise that division is not commutative, e.g. $16 \div 8$ does not equal $8 \div 16$. Relate division to multiplications 'with holes in', e.g. x = 30 is the same calculation as $30 \div 5 = 7$ thus we can count in in 5s to find the answer. Divide multiples of 10 by single-digit numbers, e.g. $240 \div 8 = 30$.

Using number facts

Know halves of even numbers to 40.

	Number facts <u>must</u>
i	be memorised and
	used on a daily basis.

28	
?	?

Using number facts

Know doubles to 20 and doubles of multiples of 5 to 100, e.g. double 45 is 90.

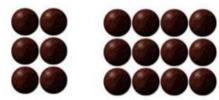

Know doubles of multiples of 5 to 100, e.g. double 85 is 170. Know 2x, 3x, 4x, 5x, 8x, 10x tables facts. Know halves of multiples of 10 to 200, e.g. half of 170 is 85. Know 2x, 3x, 4x, 5x, 8x, 10x division facts.

Use divison facts to find unit and simple non-unit fractions of amounts within the times tables, e.g. $\frac{3}{4}$ of 48 is 3 x (48 ÷ 4).

Written Multiplication

Written Division

<u>Using arrays to build understanding and make connections</u>
Use arrays to help children understand the relationships between calculations.

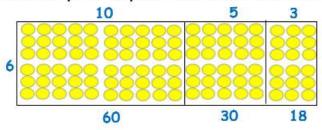

Encourage the exploration of arrays to make connections - that 4 x 3 is double 2 x 3 so the product is also double.

What would 8 x 3 be? Why?

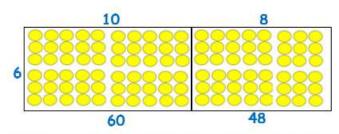

What would 16 x 3 be? Why?

Progression towards grid multiplication

Use arrays to help children understand what the grid method is.

Children can explore partitioning the number in different ways, helping with their understanding of how multiplication tables link together.

Lead towards
partitioning into the
tens and the ones as
in the abstract grid
method.

Build on partitioning to develop grid multiplication.

×	20	3	=	
4	80	12	92	

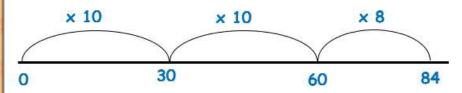

Connect division to multiplication to solve division calculations

84 ÷ 3 = How many 3s in 84?

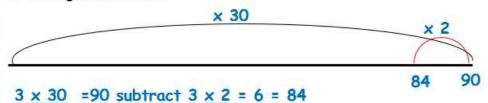

Use known facts, with numberline to reinforce understanding.

$$3 \times 10 = 30$$

 $3 \times 10 = 30$
 $3 \times 8 = 24$
 $3 \times 28 = 84$ so $84 \div 3 = 28$

Children can explore with different numberlines to find different ways of solving calculations.

Connect fractions to division

Understand that fractions relate to division – that tenths is dividing by 10, quarters is dividing by 4 etc

Children will use division methods to find fractions of small amounts:

$$\frac{4}{10}$$
 of 60 = 60 ÷ 10 x 4

Mental Multiplication

Mental Division

Counting in steps (sequences)

Count in 2s. 3s. 4s. 5s. 6s. 7s. 8s. 9s. 10s. 11s. 12s. 25s. 50s. 100s and 1000s.

Doubling and halving

Find doubles to double 100 and beyond using partitioning, e.g. double 226.

Facility in doubling and halving is key for mental x and ÷ strategies.

19 20

400 + 40 + 12 = 452

Begin to double amounts of money,

e.g. £3.50 doubled is £7.

Use doubling as a strategy in multiplying by 2, 4 and 8,

e.g. $34 \times 4 = \text{double } 34 (68) \text{ doubled again } (136).$

Grouping

Use partitioning to multiply 2-digit numbers by single-digit numbers. Multiply multiples of 100 by single-digit numbers using tables facts, $e.g. 400 \times 8 = 3200.$

Use dienes to show the relationship with place value.

4 ones \times 8 = 32 ones so 400 \times 8 = 3200 because:

4 hundreds x 8 = 32 hundreds which is 3200 ones, so 3200.

Use the abstract grid method to show multiplying by rounding $e.q. 7 \times 19 = 7 \times 20 - 7$

Using number facts

Know times tables up to 12×12 .

Counting in steps (sequences)

Count in 2s. 3s. 4s. 5s. 6s. 7s. 8s. 9s. 10s. 11s. 12s. 25s. 50s. 100s and 1000s.

Doubling and halving

Find halves of even numbers to 200 and beyond using partitioning.

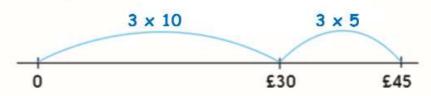

34	14
172	172

Begin to half amounts of money, e.g. £9 halved is £4.50. Use halving as a strategy in dividing by 2, 4 and 8, e.g. $164 \div 4$ is half of 164

(82) halved again (41).

Grouping

Use multiples of 10 times the divisor to divide by numbers <9 above the tables facts, e.g. $45 \div 3$.

Divide multiples of 100 by single-digit numbers using division facts, e.g. $3200 \div 8 = 4000$.

Using number facts

Know times tables up to 12 x 12 and all related division facts. Use division facts to find unit and non-unit fractions of amounts within the times tables, e.g. $\frac{7}{2}$ of 56 is 7 x (56 \div 8).

Written Multiplication

Written Division

Use grid multiplication to multipy 3-digit by 1-digit numbers.

x	200	50	3	= 1518
6	1200	300	18	- 1010

If children understand place value they can develop fluency.

Formal Short Multiplication

Move from grid method to short multiplication to multiply 3-digit numbers by 1-digit numbers.

127 (6x7)+ 1 2 0 (6x20)

762

Use the expanded column method as a bridge from the grid method to the formal short method to demonstrate to children the place value. Use it as a teaching point towards children learning the short method.

Use the language of place value to ensure understanding.

600 (6x100) 6 x 7 ones is 42 ones, which is 4 tens and 2 ones, so the 4 is placed in the tens column and the 2 in the ones column

> 6 x 2 tens is 12 tens, but we also have 4 tens already, making 16 tens. 16 tens is 1 hundred and 6 tens, so we place the 1 in the hundreds column

6 x 1 hundred is 6 hundreds, plus the extra hundred we already have so we have 7 hundreds.

Ensure the digits that are regrouped are written under the line in the correct column, smaller than the actual digits in the calculation.

Connect division to multiplication to solve division calculations Build on work from year 3 to continue to understand division as the inverse of multiplication, using known facts to solve calculations.

Use known facts and knowledge of partitioning, with a numberline to reinforce understanding.

$$3 \times 80 = 240$$

$$3 \times 4 = 12$$

$$3 \times 84 = 252 \text{ so } 252 \div 3 = 84$$

$$\times 80 \qquad \times 4$$

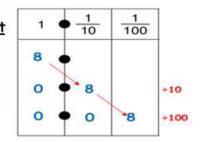

Introduce the formal division layout

Using numbers under 100, introduce children to formal division, at first using partitioning and known facts.

$$7 \frac{10+4=14}{70+28}$$
 98 ÷ 7 = 14 $7 \frac{14}{9^28}$

Use a place value grid for dividing 1 digit numbers by 10 and 100

Identify the value of the digits in each number as ones, tenths and hundredths.

Mental Multiplication

Doubling and halving

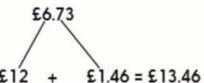

Double amounts of money using partitioning, e.g. £6.73 doubled is double £6 (£12) plus double 73p (£1.46).

Use doubling and halving as a strategy in multiplying by 2, 4, 8, 5 and 20,

e.g. 58 x 5 = ½ of 58 (29) x 10 (290).

Doubling and halving

Partitioning remains a key

skill throughout.

Grouping

Multiply decimals by 10, 100, 1000, $e.g. 3.4 \times 100 = 340.$

100s	10s	1s	.	0.1s	
		3		_4	
3 4	44	0			

Use partitioning to multiply friendly 2-digit and 3-digit numbers by single-digit numbers, e.g. 402×6 as 400×6 (2400) and 2×6 (12).

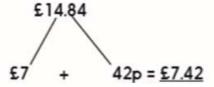

Develop understanding of commutative law, associative law and distributive law to find "easy" routes to solve

calculations

and division facts.

Learning times tables involves BOTH multiplication Halve amounts of money using partitioning, e.g. half of £14.84 as half of £14 and half of 84p.

Mental Division

Use doubling and halving as a strategy in dividing by 2, 4, 8, 5 and 20, e.g. $115 \div 5$ as double $115 (230) \div 10$.

Grouping

Divide numbers by 10, 100, 1000 to obtain decimal answers with up to three places, e.g. $340 \div 100 = 3.4$.

Use the 10th, 20th, 30th ... multiple of the divisor to divide friendly 2-digit and 3-digit numbers by single-digit numbers,

e.g. $186 \div 6$ as 30×6 (180) and 1×6 (6).

Find unit and non-unit fractions of large amounts, e.g. 3/5 of 265 is $3 \times (265 \div 5)$

Use the bar model when representing fractions of numbers.

	265			
53	53	53	53	53

Using number facts

Use times tables facts up to 12 x 12 to multiply multiples of the multiplier, $6 \times 4 = 24$ so $0.6 \times 4 = 6 \times 4 \div 10 = 2.4$

Using number facts

Use division facts from the times tables up to 12 x 12 to divide mutiples of powers of ten of the divisor, e.g. $3600 \div 9$ using $36 \div 9$.

Written Multiplication

Short multiplication of 2-digit, 3-digit and 4-digit numbers by 1-digit numbers.

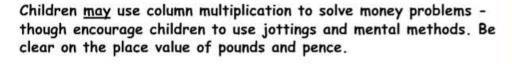

127	£1.27
<u>x 6</u>	<u>x 6</u>
762	£7.62

The closer division is linked to multiplication the better.

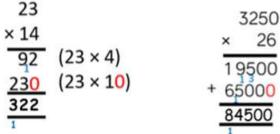

Written Division

Short divison of 3-digit and 4-digit numbers by single-digit numbers.

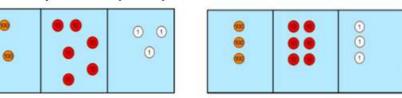

Children who are struggling to grasp the method from year 4 may use place value counters to aid understanding.

Multiply a 2-digit number by a 2-digit number, progressing to the multiplication of 2-digit number by a 3-digit and 4-digit number.

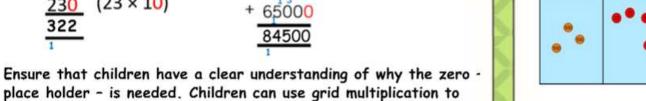

Visual images are essential to multiplying and dividing fractions.

163 ÷ 3 is seeing "how many groups of 3" are in 163. Children can use counters to make groups of 3. 163 ÷ 3 = 121

Children can use counters to help understand exchanging where a full group cannot be made. 345 + 3 =

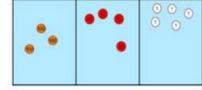

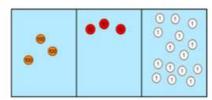

place holder - is needed. Children can use grid multiplication to check their solutions; being confident in both methods is great.

Multiplying fractions

Children should connect multiplying proper and mixed fractions by a whole number to repeated addition and use visuals to aid understanding.

$$\frac{1}{6} \times 4 = \frac{1}{6} + \frac{1}{6} + \frac{1}{6} + \frac{1}{6} = \frac{4}{6} = \frac{2}{3}$$

$$432 \div 5 = 86 \text{ r}2$$

$$\frac{86 r^2}{5 \sqrt{43^32}}$$

Children will learn to express the remainder as a fraction - the remainder divided by the divisor.

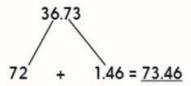

$$432 \div 5 = 86\frac{2}{5}$$

Mental Multiplication

Mental Division

Doubling and halving

Double decimal numbers with up to 2-places using partitioning, e.g. 36.73 doubled is double 36 (72) plus double 0.73 (1.46).

Understanding how to partition numbers underpins many calculation strategies.

Use doubling and halving as strategies in mental multiplication.

Grouping

Use partioning as a strategy in mental multiplication, as appropriate, e.g. 3060×4 as $(3000 \times 4) + (60 \times 4)$ or 8.4×8 as 8×8 (64) and 0.4×8 (3.2)

Use factors in mental multiplication, e.g. 421 x 6 as 421 x 3 (1263) doubled (2526) or 3.42 x 5 as half of 3.42 x 10.

Mutliply decimal numbers using near multiples by rounding, e.g. 4.3×19 as 4.3×20 (86 - 4.3).

Division as grouping, i.e. the inverse of multiplication,

is a key concept.

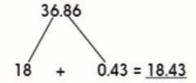

Using number facts

Use times tables facts up to 12 x 12 in mental multiplication of large numbers or numbers with up to two decimal places,

e.g. 6 x 4 = 24 and 0.06 x 4 = 0.24.

Doubling and halving

Halve decimal numbers with up to 2-places using partitioning, e.g. half of 36.86 if half of 36 (18) plus half of 0.86 (0.43).

Use doubling and halving as strategies in mental division, e.g. $216 \div 4$ is half of 216 (108) and half of 108 (54).

Grouping

Use 10th, 20th, 30th, ... or 100th, 200th, 300th ... multiples of the divisor to divide large numbers, e.g. $378 \div 9$ as $40 \times 9 = 360$ and $2 \times 9 = 18$ so, the answer is 42.

$$378 \div 9 =$$
__ $\times 9 = 378 = 9 \times$ __ = 378
 $9 \times 40 = 360$
 $9 \times 2 = 18$
 $9 \times 42 = 378$ so $378 \div 9 = 42$

Use test for divisibility, e.g. 135 divides by 3 as 1 + 3 + 5 = 9 and 9 is in the 3x table.

Using number facts

Use division facts from the multiplication tables to help divide decimal numbers by single digit numbers

Written Multiplication

Written Division

Short multiplication of 2-digit, 3-digit and 4-digit numbers by 1-digit numbers.

$$\begin{array}{r}
 127 \\
 \underline{x} \quad 6 \\
 762 \\
 \hline
 14
 \end{array}$$

Short division of 3-digit and 4-digit numbers by single-digit numbers. Short versions of multiplication

and division are more important and useful than the long versions.

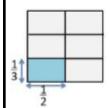

Long multiplication of 2-digit, 3-digit and 4-digit numbers by 2-digit numbers.

+ 65000

Short multiplication of decimal numbers using x 100 and \pm 100, e.g. 13.72×6 as $1372 \times 6 \div 100$.

Short multiplication of money, e.g. £13.72 x 6 or £23.67 x 3.

Multiply proper and improper fractions by fractions, by using images to support understanding. Children should be encouraged to see the relationship between x and of.

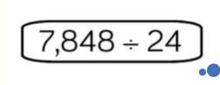

$$\frac{1}{3} \times \frac{1}{2} = \frac{1}{6}$$

$$\frac{1}{3}$$
 of $\frac{1}{2} = \frac{1}{6}$

$$\frac{4}{5} \times \frac{2}{3} = \frac{8}{15}$$

When children understand. they can apply to larger non-unit fractions

Use knowledge of factor pairs to solve division calculations including 3-digit and 4-digit by a 2-digit number then use short division

 $7848 \div 4 \div 6$ $7848 \div 2 \div 2 \div 6$ $2848 \div 2 \div 12$

Long division of 3-digit and 4-digit numbers by two-digit numbers.

Children write out the multiples and add a column for x10 and x100. They pick the closest number to that being divided, writing the number of groups along the top and subtracting from the total until complete.

Divide fractions by whole numbers by using $\frac{1}{2} \div 3$ imagery and context to support understanding.

$$\frac{1}{6} \div 3 = \frac{1}{6} \div \frac{3}{1} = \frac{1}{6} \times \frac{1}{3} = \frac{1}{18}$$
